## Cloud Based ERP Solution

Access your  
business anywhere  
from the world

# WHO WE ARE

---

**We don't just provide a Business Application Suite, we train the to use it in the best way**

**-It's How We Built Our Company**

**Our company started doing customized business applications in the early 2000's. As we grew, we realized the difficulties many companies faced when trying to manage their Accounts, Inventory, Purchases, Sales, and even the employees. From that point forward, we started streamlining our applications and developed a standard product to solve these problems in all types of organizations.**

**At our current stage, we are providing business solutions to more than 300 customers in and around the Kingdom of Bahrain and Kingdom of Saudi Arabia. Our well trained programmers and implementers always make sure customers get the proper support whenever they need it.**

# OUR STORY

## The History of Diamond Software

### Catalyst 800 [2018]

Launched a cloud-based ERP solution. A complete package of Accounts, Inventory, Production, Job Costing, Human Resource and Fixed Assets management.

### Catalyst 600 [2009]

At this point, we started making standard ERP solution software which suited all types of companies and reduced individual customizations. We separated the modules and started selling it separately.

### Catalyst 400 [2002]

At this point, we started making standard We added enhanced software by adding a lite module for payroll. The inventory module became stable.

### Catalyst 700 [2011]

A client server based application. Introduced the enhanced Human Resource module with Project Job Costing and Bill Of Quantity. Point Of Sales (Nexus 7) became stronger. We started serving a strong ERP solution for construction companies.

### Catalyst 500 [2005]

The most sold version of Diamond Software which is still being used by many of our customers. We customized projects in accordance with the customer's specific requirements. A strong foundation was attained in the Kingdom by launching this version. We introduced our Point of Sale software to the market.

### Catalyst 300 [2000]

We started our company with customized Accounting software specifically made as per the user's requirements.

- **Item Enquiry**
- **Batch Tracking & Expiry Control**
- **Multiple Shift Management & Cash Floats**
- **Supports Multi-Cashier login**
  - **Easy Login Option to Swap Between Cashiers**

# PRODUCT MODULES

We can fulfill all your business needs

## Finance & Accounts

Allows you to prepare financial reports, establish budgets for forecasting, reconcile your bank statements, utilize journals for passing entries, create masters for recurring entries, expand cost profit centers, and finalize financial closing. The integration with other modules will allow the user to allocate each transaction. The dashboard feature allows you to drill down your information and provide detailed analysis of the company's financial status. The system can keep a track of your Post Dated Checks and it can give a notification at the time of maturity.

## Human Resource

A technologically advanced tool which is powerful, cost-effective, and easy to use. It allows employees to do login using the employee web portal. It helps manage employee data, which includes a fully automated attendance and payroll process. It contains many configurable policies which can make the system automatically calculate employee attendance, indemnity, leave dues, ticket dues and lot more. It can handle personnel related things such as document management, attendance & scheduling, payroll & salary management, employee's dues & settlement.

## Sales and Receivable

Our sales and receivables cycle start with a pre-sale transaction. The dynamic linking of transactions helps the user in a lesser data encoding time. At any point, a user can prepare a sales inquiry, pass a quotation, convert transactions into sales orders once approved and process delivery notes or invoices with a click. The whole operation allows you to track the flow of the sales process. The dashboard feature allows drilling down your information and providing detailed analysis of the sales which helps the management to take critical decisions.

## Job Costing

The Job Costing module allows the user to analyze individual construction, manufacturing, or other type of jobs. The system provides analytical reports which allow management to make decisions based on the profitability of individual projects or jobs. The integrated Human Resources module allows the user to assign laborers to particular jobs. The cost estimation tool collects and analyzes data in order to estimate the time, money, materials, and labor required to manufacture a product or construct a building. It can alert the user if costs exceed the estimated amount.

### **Purchase and Payable**

Accounts Payable can be configured to meet the varying needs of today's businesses. You can quickly set up the software for maximum functionality and efficiency. The system allows you to optimize your purchase power. Through the Purchase Order builder concept, the system gives you choices to which supplier you will place the order. The system is capable to remember previous purchase prices, suggest which items to order according to volume of sales and remaining stock in hand. It can batch tracking as well as expiry maintenance.

### **Real Estate**

The module can manage property and facilities managers of retail, office, industrial, residential and body corporate portfolios. Integration with accounts & fixed asset module will help to provide the real-time financial reporting. It uses the advanced technology which provides the option of logging in to a web portal where tenants can view financial activities, raise complaints, or maintenance related issues to management with the image upload facility. Perform your Fixed Asset depreciation calculations with one click. You can also track and transfer asset between the locations.

### **Inventory Management**

The value of your stocks requires monitoring. The system will give you leverage on handling your stock at any time. As Inventory is integrated with Sales and Purchases, it serves as management's tool that gives you the latest status of your inventory. The integration ensures you of efficient, effective stock line and improves reordering procedures. The system will automatically track your sales and will auto generate the reports for slow, fast and non moving items. It can even generate the replenishment report automatically.

### **Production**

The module is designed for the specific needs of manufacturing industries and include core capabilities. It facilitates production planning, taking orders, and delivering products to customers. The system will provide an easy way to product mix and the user can even perform complex manual productions. The user can perform on demand production using the system. It will allow the user to produce the quantity exactly they need. The system also allows performing bulk production and it will drastically reduce the wastage of raw materials and finished goods.
